Communities and states are interconnected.

Attend the third tabletop exercise to explore flows of information between community and state organizations.

Tabletop Exercise 3

Communities and states are interconnected and rely on one another for the safety and security of their constituents. Being prepared means working together to protect our cyber assets.

The third cyber security exercise is designed for senior leadership and decision makers with key roles in executing plans for information sharing within a community or state. The goal of the exercise is to demonstrate flows of information between state and community organizations. We all have a responsibility for preparing and protecting our communities from increasing cyber risks. Attend to find out how to take information sharing and analysis discussions to the next level.

Overview

The third tabletop exercise is a community and state cyber security exercise. This is a discussion-based exercise aimed at demonstrating the value of enhancing the flows of information between community and state organizations. The event will include representatives from the state and two communities within the state. The goals of this exercise are to examine existing or future plans for information sharing and analysis as well as identify communication between stakeholders. There will be a continued emphasis on cyber security awareness, policies and procedures, and training and education.

Participants are separated into three geographical locations (two communities and the state). A series of events designed to address key cyber security issues and information sharing are presented throughout the day. A CIAS facilitator is present to guide the discussion and provide discoverable details pertaining to each event.

Typical Attendees

Community
- City/county
- Law enforcement
- Industry
- ISP/Telco

State Government
- State Information Technology/Security Organization
- Governor, Senior Officials, Administrative Departments
